

PUCKER RESISTANT FILM AND PACKAGE

ABSTRACT OF THE DISCLOSURE

A flexible food package with a wall comprised of thin film layers, at least one of which has a reduced permeability characteristic that reduces absorption by the package wall of oils associated with the food product in the package. The reduced permeability characteristic is achieved by decreasing the amount of amorphousness in the polymers forming the thin film layer. Reducing the amount of oil absorbed by the package wall reduces the amount of swelling, puckering, and disfigurement of the package.
